

## 4.1 Extreme Values of Functions

Extrema

local (relative)

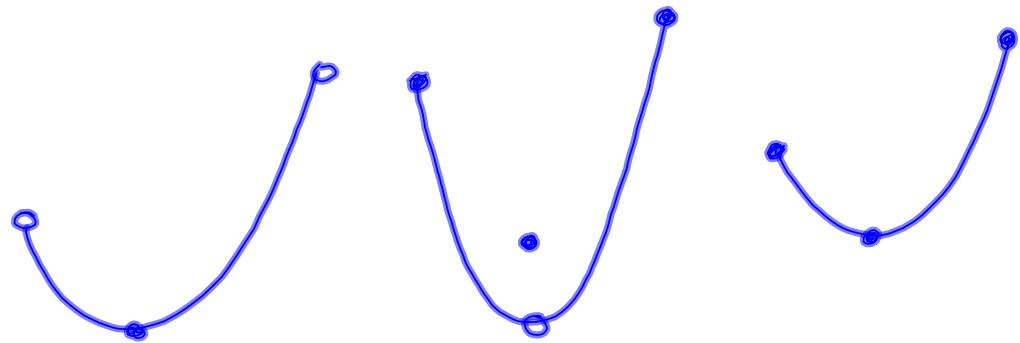

global (absolute)

Oct 12-8:27 PM

Extreme Value Theorem (EVT)

if  $f$  is continuous on the closed interval  $[a, b]$ , then  $f$  has both a max and a min on the interval.

Oct 12-8:42 PM

Candidates for max/min?

Critical points  
endpoints

Candidates for extremes:

Oct 12-8:35 PM

Ex. Find the extrema for  $f(x) = 3x^4 - 4x^3$  on  $[-1, 2]$

endpts:  
critical pts:

Oct 12-8:37 PM

Ex. Find the extrema for:  $f(x) = 2x - 3x^{\frac{2}{3}}$  on  $[-1, 3]$

Oct 12-8:38 PM

$$f(x) = \frac{1}{\sqrt{4-x^2}}$$

Oct 12-8:44 PM

$$f(x) = \begin{cases} 5 - 2x^2, & x \leq 1 \\ x + 2, & x > 1 \end{cases}$$

Oct 12-8:44 PM

Oct 12-8:46 PM
